Inspiration and commitment concerning quality in scientific articles

It is with great pleasure that we present volume 14, number 31 of the Pediatric Residency Journal. In this edition, we bring a diverse selection of articles that reflect the richness and complexity of pediatric practice.

The topics covered range from reports of rare cases, such as Garrè's osteomyelitis and Pearson's syndrome, to discussions on critical public health issues, such as teenage pregnancy and pulmonary tuberculosis. Each article contributes to collective knowledge and the ongoing training of professionals dedicated to children's health.

Peer review and rigorous research ensure the quality of the content, reinforcing our commitment to science and education in the field of pediatrics. We hope that you, the reader, will find not only valuable information, but also inspiration for your clinical practice.

It is worth remembering that all articles follow the Vancouver citation standards, a standard widely used in the healthcare field and essential to ensure the quality and uniformity of bibliographic references. This standardization facilitates access to information and contributes to the scientific credibility of each study.

We hope that this edition inspires residents to explore these topics in greater depth and to become agents of change in pediatric care. May each article be an incentive for them to continue learning and contributing to an increasingly humane and qualified pediatric practice.

In addition, we would like to thank all the authors, reviewers and collaborators who made this edition possible, and we wish everyone a fruitful reading.
